# EXPLORE EARTH

John Haynes, MS  
Applied Sciences Program  
Earth Science Division  
Science Mission Directorate

ICES Biennial Meeting

December 3, 2019

# NASA Earth Science Missions: Present through 2023

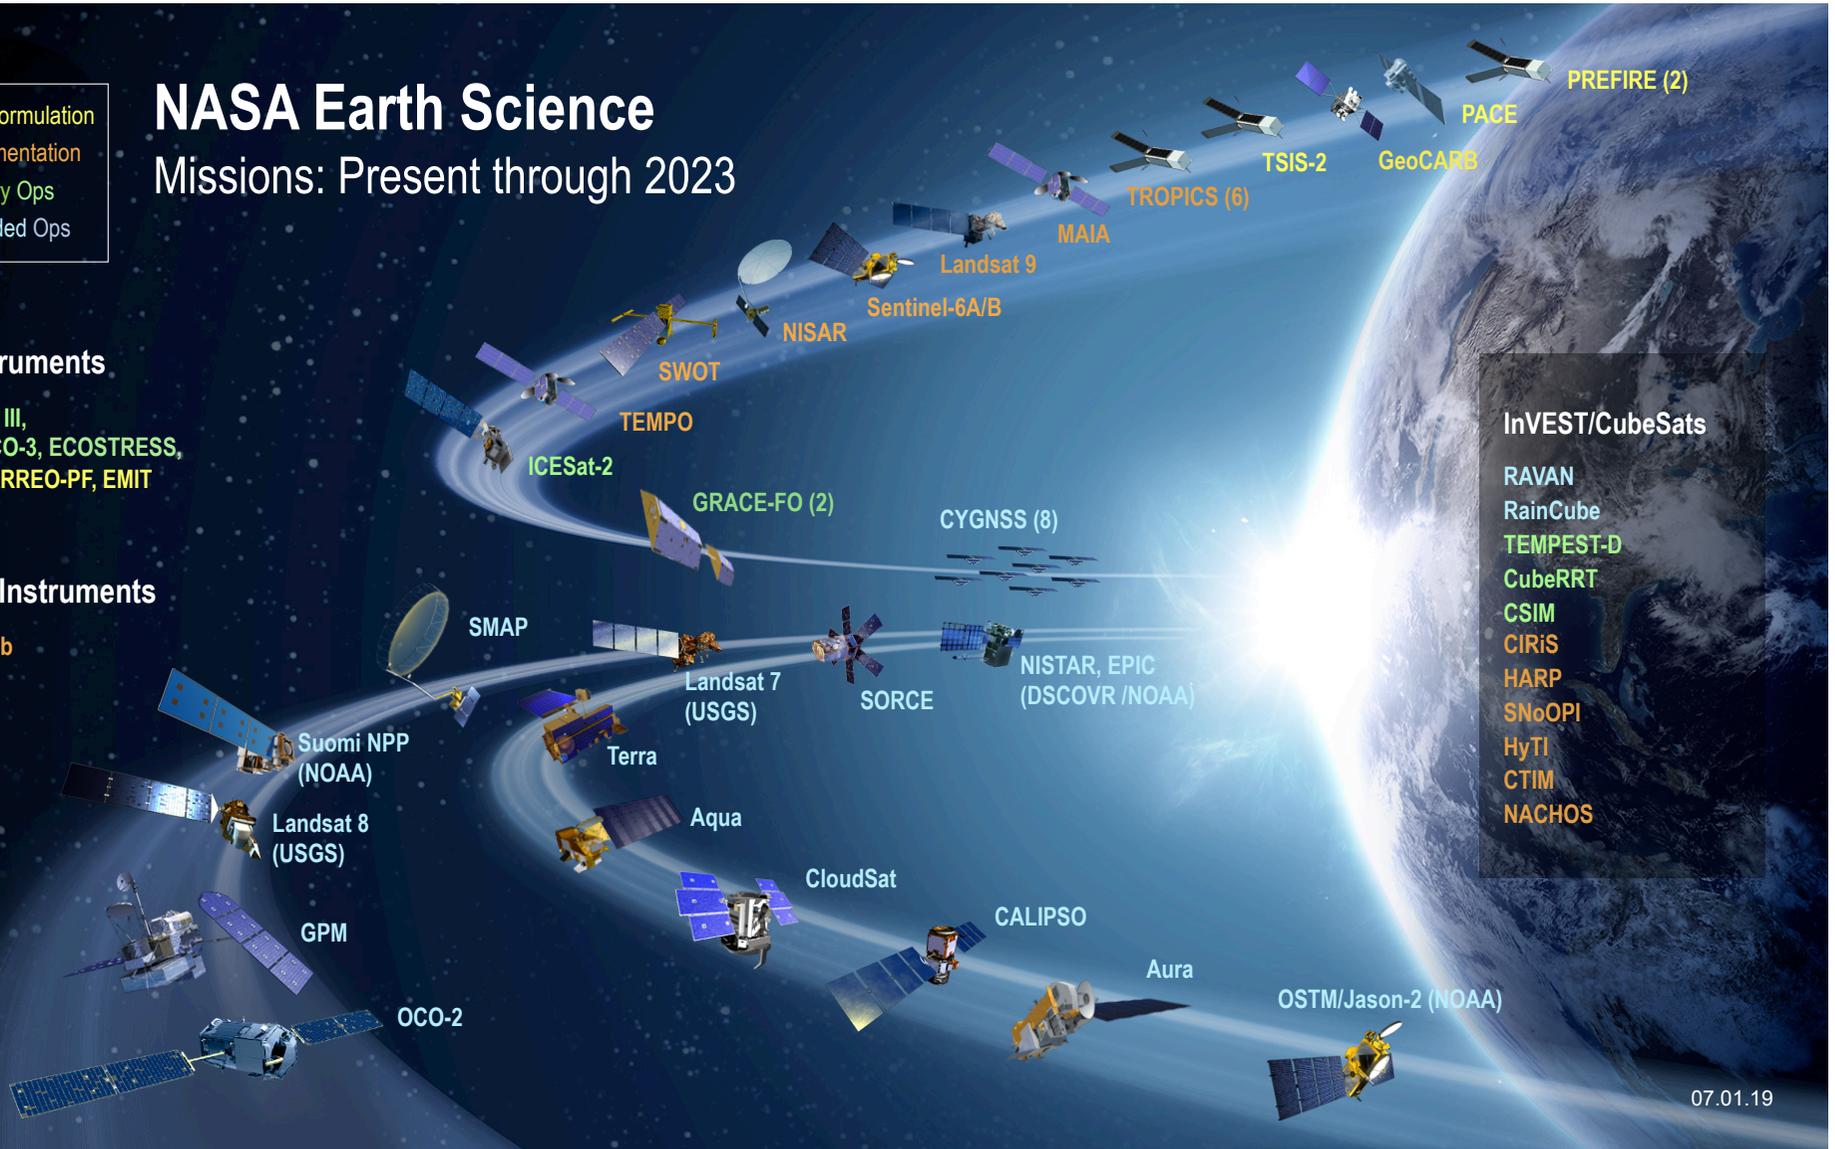

- (Pre)Formulation
- Implementation
- Primary Ops
- Extended Ops

## ISS Instruments

LIS, SAGE III, TSIS-1, OCO-3, ECOSTRESS, GEDI, CLARREO-PF, EMIT

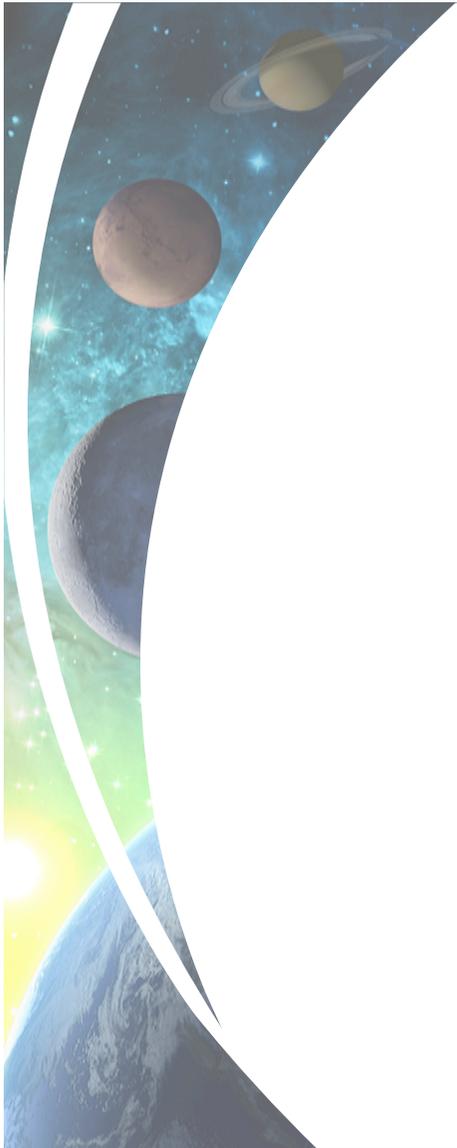

## JPSS-2 Instruments

OMPS-Limb

### InVEST/CubeSats

- RAVAN
- RainCube
- TEMPEST-D
- CubeRRT
- CSIM
- CIRiS
- HARP
- SNoOPI
- HyTI
- CTIM
- NACHOS

## ***NASA Applied Sciences Program***

***Discovering and demonstrating innovative and practical uses of Earth observations in organizations' policy, business, and management decisions.***

***<http://AppliedSciences.NASA.gov>***

---

### ***Applications***

Prove-out, develop, and transition applications ideas for sustained uses of Earth obs. in decision making.

### ***Capacity Building***

Build skills and capabilities in US and developing countries to access Earth observations to benefit society.

### ***Mission Planning***

Identify applications early in mission lifecycle and integrate end-user needs in mission design and development.

# Applications Areas

## Areas of Applications Emphasis

**Health & Air Quality**

**Water Resources**

**Ecological Forecasting**

**Disasters**

**Agriculture / Food Security**

## Support opportunities in additional areas

**Energy**

**Urban Development**

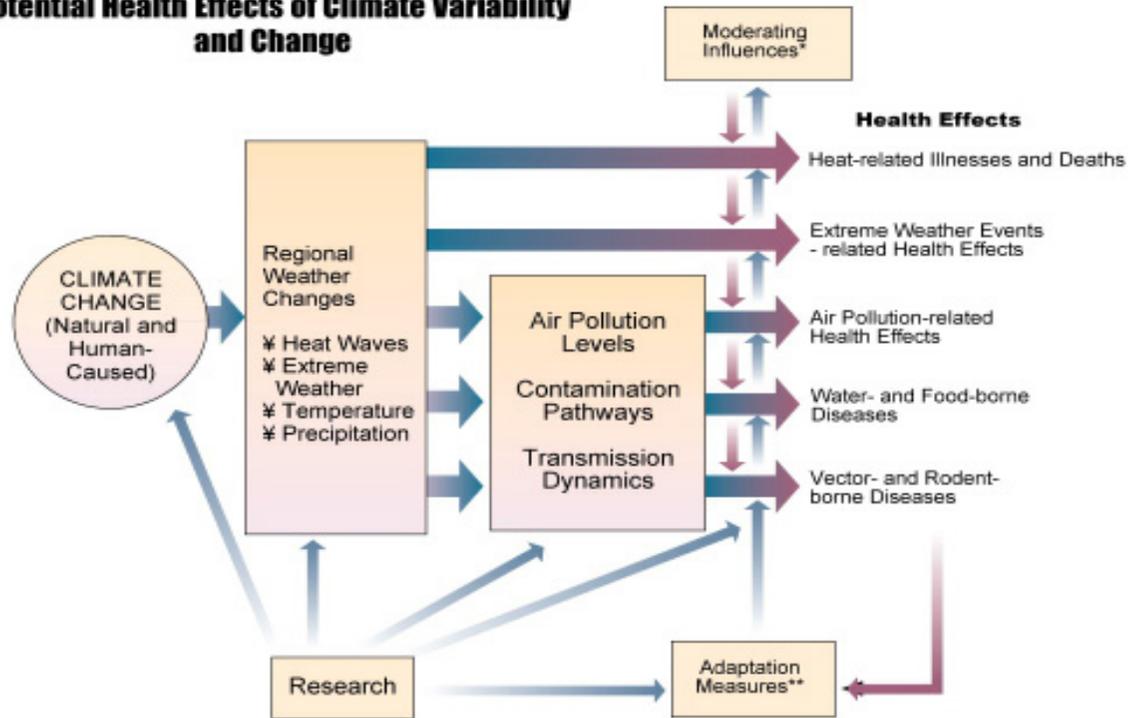

**Transportation / Infrastructure**

*Climate & weather cross-cut all areas*

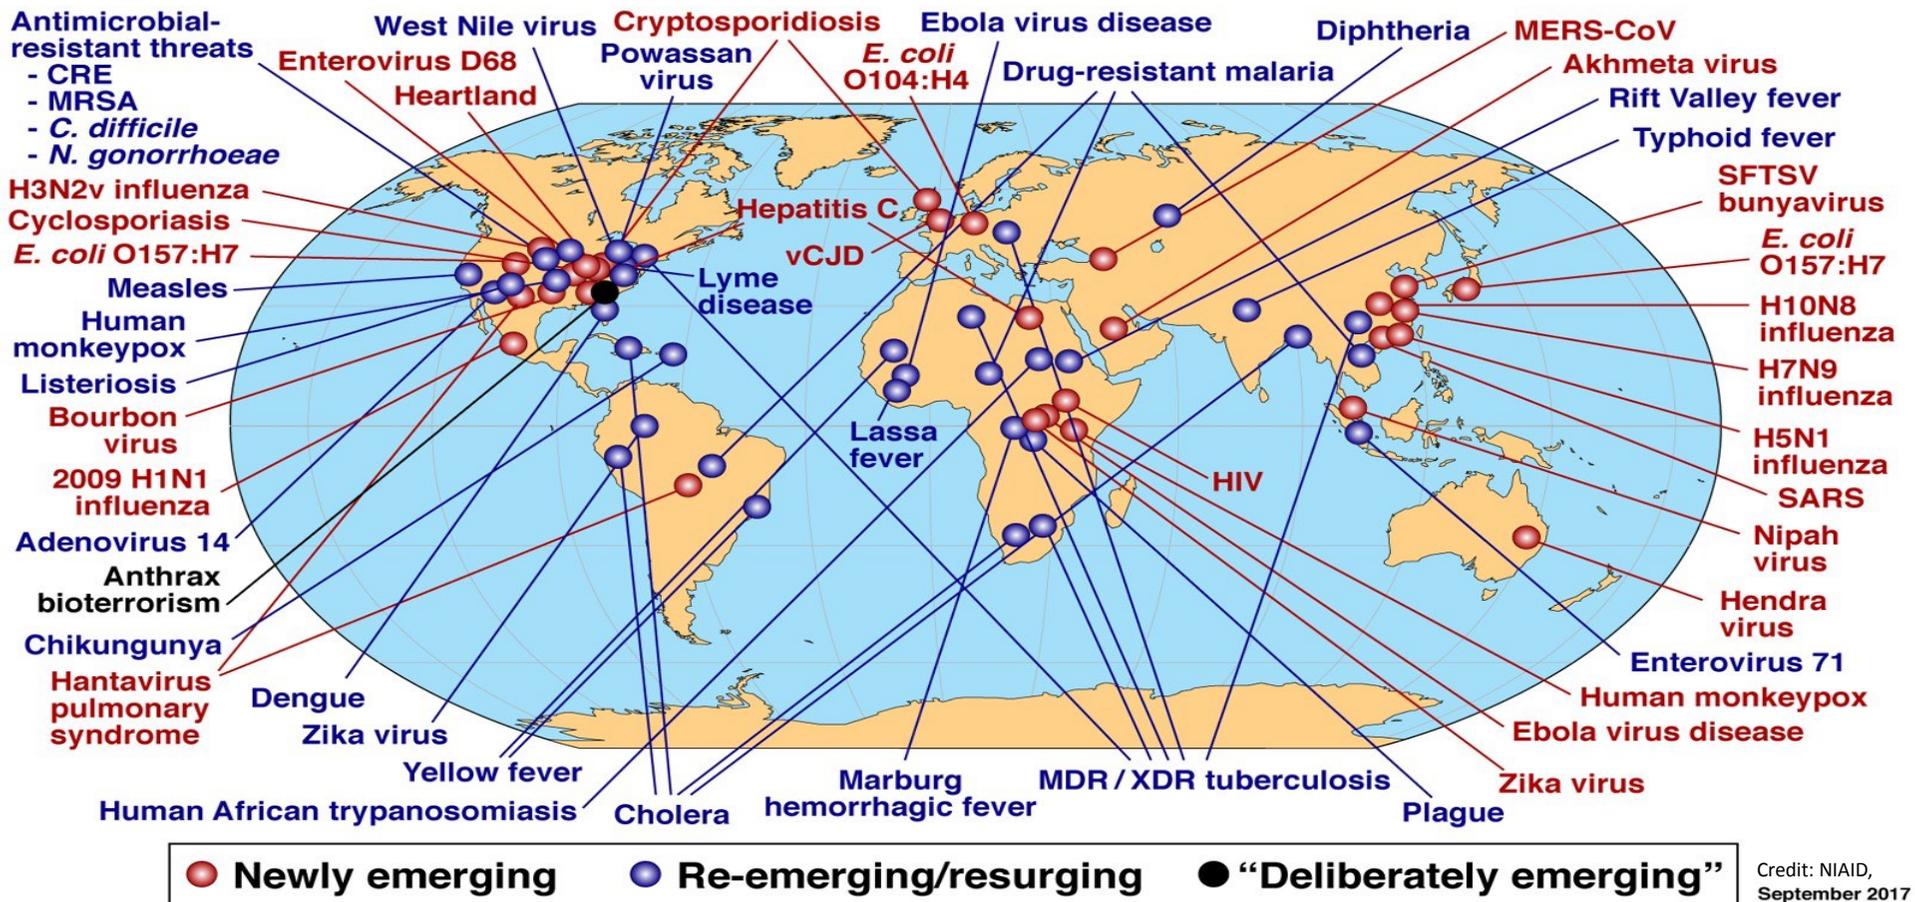

# Why Health & Air Quality?

## Potential Health Effects of Climate Variability and Change

Source: GEO, 2003

# Global Examples of Emerging and Re-Emerging Infectious Diseases

Credit: NIAID, September 2017

# AIR POLLUTION – THE SILENT KILLER

Every year, around **7 MILLION DEATHS** are due to exposure from both outdoor and household air pollution.

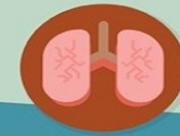

**Air pollution is a major environmental risk to health.** By reducing air pollution levels, countries can reduce:

**Stroke**

**Heart disease**

**Lung cancer, and both chronic and acute respiratory diseases, including asthma**

## REGIONAL ESTIMATES ACCORDING TO WHO REGIONAL GROUPINGS:

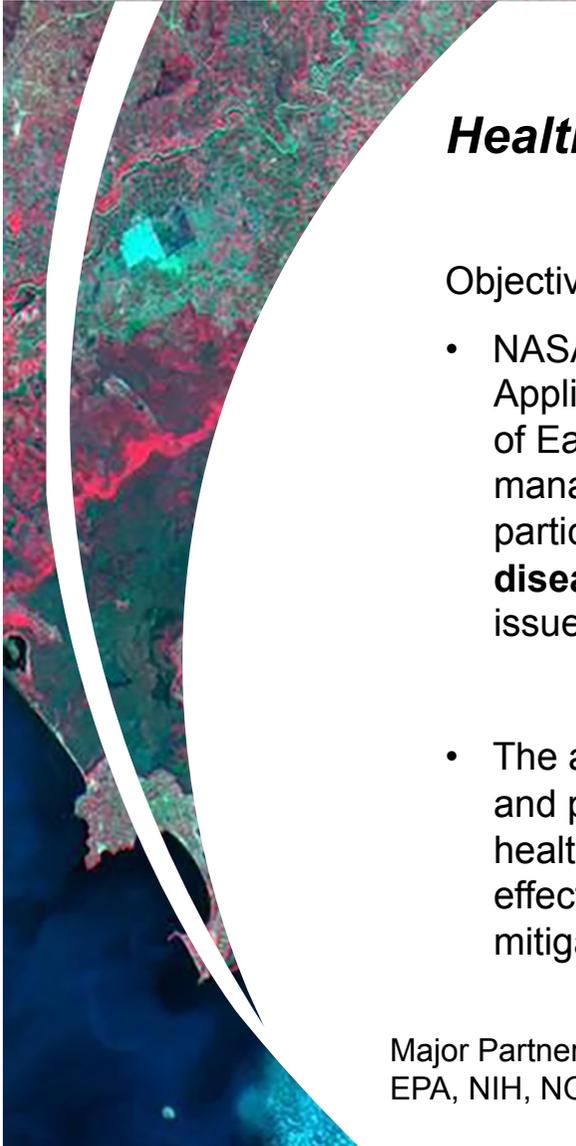

- Over 2 million** in South-East Asia Region
- Over 2 million** in Western Pacific Region
- Nearly 1 million** in Africa Region
- About 500 000** deaths in Eastern Mediterranean Region
- About 500 000** deaths in European Region
- More than 300 000** in the Region of the Americas

**CLEAN AIR FOR HEALTH**

**#AirPollution**

## **Health & Air Quality**

### Objectives:

- NASA's Health & Air Quality Applications Area supports the use of Earth observations in air quality management and public health, particularly regarding **infectious disease and environmental health** issues.
- The area addresses issues of toxic and pathogenic exposure and health-related hazards and their effects for risk characterization and mitigation.
- The area promotes uses of Earth observing data and models regarding **implementation of air quality standards, policy, and regulations** for economic and human welfare.
- The Health & Air Quality Applications Area also addresses **effects of climate change on public health and air quality** to support managers and policy makers in their planning and preparations.

Major Partners include International (e.g., GEO, WHO, UNICEF, PAHO), Federal (e.g., CDC, EPA, NIH, NOAA), State (e.g., South Dakota, California, Texas), and Private sectors (AER, Inc.).

# Enhanced Data-Driven Decision Support for Highly Invasive Vectors

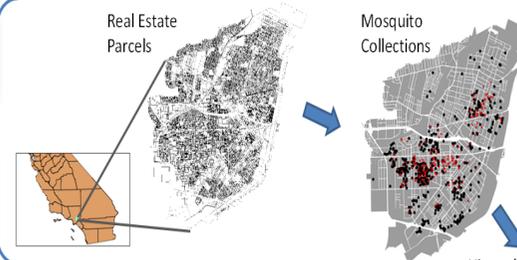

PI: Dr. Chris Barker, UC-Davis

## Purpose and Objective

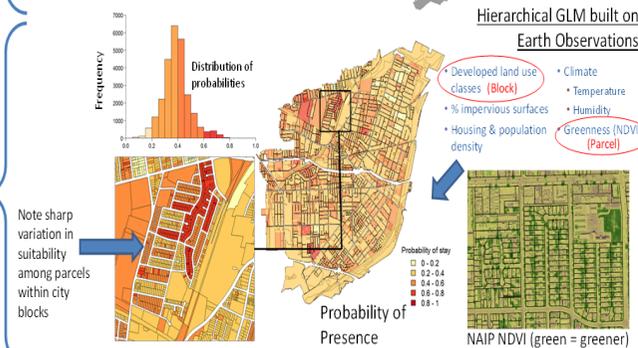

The CalSurv Gateway was built originally as a decision-support system for West Nile virus. The NASA Health & Air Quality project focuses on decision support tools for controlling the invasive mosquitoes, *Aedes aegypti* and *Aedes albopictus*, and for estimating and mapping the risks for dengue, chikungunya, and Zika viruses. This slide shows new maps for end users that present real-time surveillance maps for the invasive mosquitoes, and our climate-based suitability estimates for *Aedes aegypti* in the U.S.

## Mosquito Collection Data

## Suitability estimates

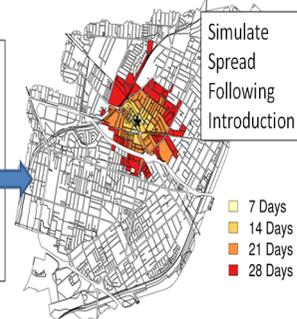

## Receptivity Surface

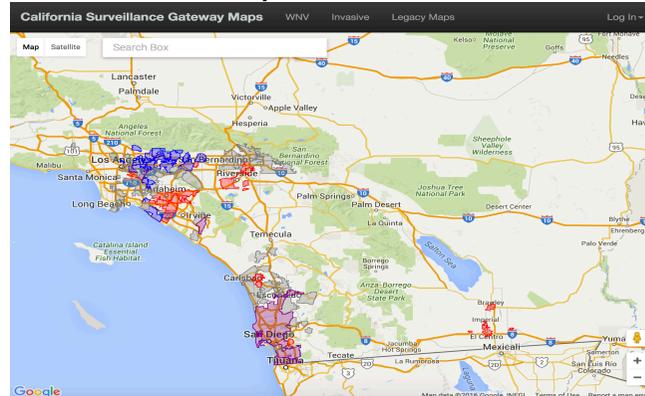

## Spread simulation

- Mosquito movement to neighboring parcels
- Gonotrophic period =  $f(\text{temperature})$
- Immature development =  $f(\text{temperature})$
- Eggs per batch = 40 (~lifetime average)
- Adult daily survival = 93%
- Egg daily survival = 95%

## Simulate Spread Following Introduction

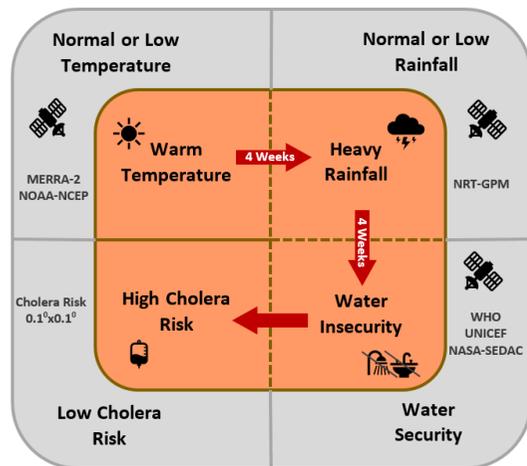

## Real-time maps of Aedes Distribution

## A Multi-Sensor Remote Sensing Approach to Predict Cholera

PI: Dr. Antar Jutla, U. of Florida

Application of Earth observations for connecting large-scale hydro-climatological processes with cholera occurrence in epidemic regions.

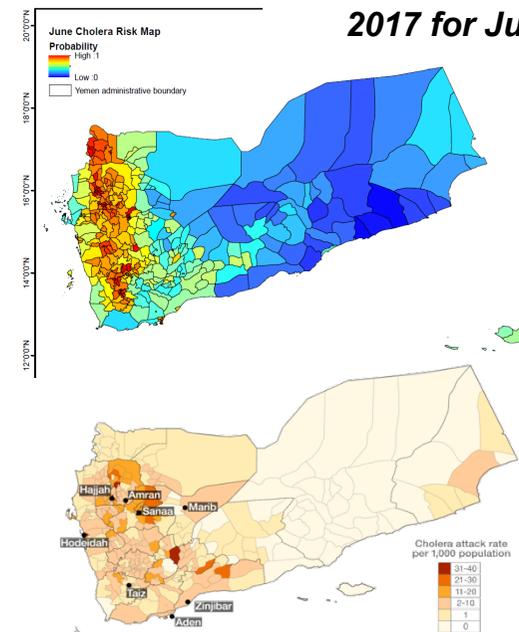

Warm temperature= above climatological average temperature  
 Heavy rainfall= above climatological average precipitation  
 Water insecurity=lack of access to water and sanitation access  
 High cholera risk=probability of cholera greater than 50%

Simplified representation of the epidemic cholera algorithm that used GPM, MERRA-2, NOAA-NCEP and SEDAC data.

Types of Earth Observations used (depending on location)

- Landsat: Land Use
- MODIS/VIIRS: Surface Temperature, Ocean Color
- TRMM/GPM: Precipitation
- MERRA: Air Temperature
- GRACE: Water Storage
- GPM: Precipitation
- JASON: Sea Surface Height
- AVHRR: Sea surface temperature
- SRTM: Elevation

Risk estimated on 30.May. 2017 for June 2017

Reported cholera cases for June 2017 (Source: WHO)

# Health and Air Quality Applied Sciences Team (HAQAST)

## Connecting NASA Data and Tools with Health and Air Quality Stakeholders

Tracey Holloway - Team Lead (University of Wisconsin-Madison)  
Bryan Duncan (NASA Goddard Space Flight Center)  
Arlene Fiore (Columbia University)  
Minghui Diao (San Jose St. University)  
Daven Henze (University of Colorado, Boulder)  
Jeremy Hess (University of Washington, Seattle)  
Yang Liu (Emory University)  
Jessica Neu (NASA Jet Propulsion Laboratory)  
Susan O'Neill (USDA Forest Service)  
Ted Russell (Georgia Tech)  
Daniel Tong (George Mason University)  
Jason West (University of North Carolina, Chapel Hill)  
Mark Zondlo (Princeton University)

**Last Meeting: July 10-12, 2019, in Pasadena, CA**  
**Stakeholder Webinars Planned for Winter 2020**  
**Joint Workshop Planned with EPA for June 2020**  
<https://haqast.org>

# NASA Aura OMI Shows Air Quality Improved

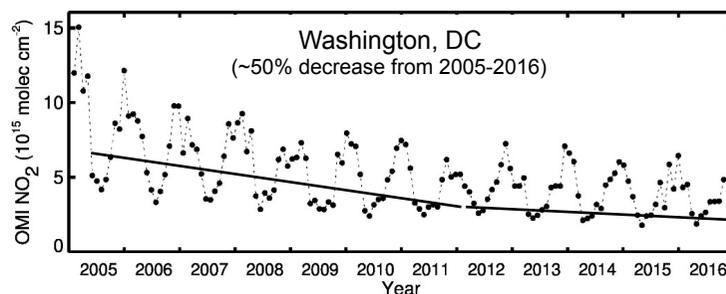

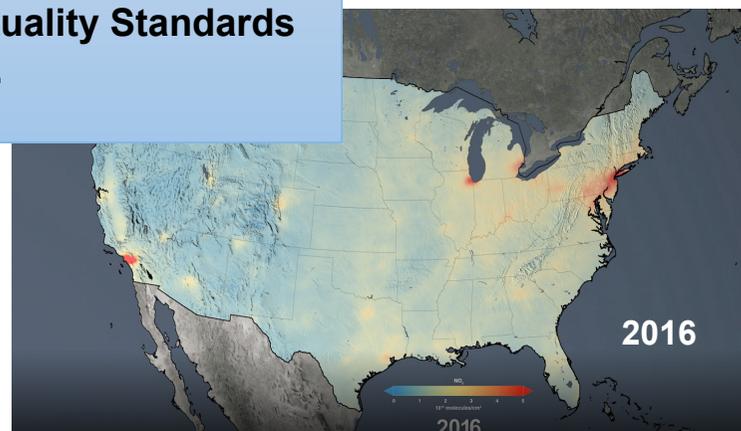

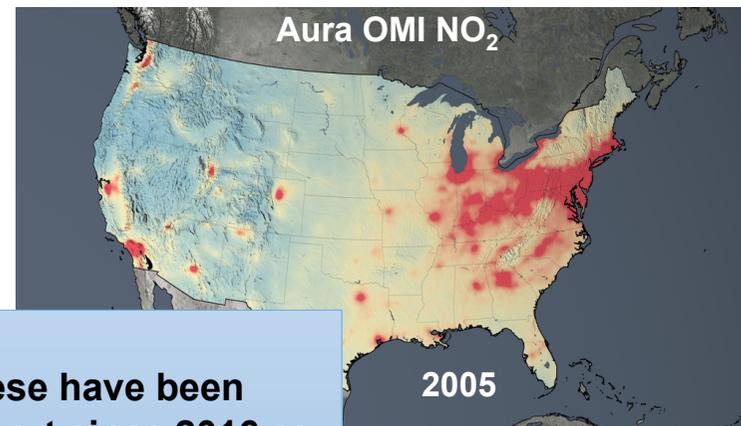

- Nitrogen dioxide (NO<sub>2</sub>) is a pollutant that is unhealthy to breathe and contributes to the formation of unhealthy levels of surface ozone pollution. It is primarily emitted from tailpipes and smokestacks.

- Aura Ozone Monitoring Instrument (OMI)

NO<sub>2</sub> data show a decrease of the U.S. from 2005 to 2016 due to tougher

- While OMI data were first collected in 2005, a significant decrease in NO<sub>2</sub> occurred from 2005 to 2016, with levels changed less

**Earth observations such as these have been included in the EPA Air Trends Report since 2016 as part of the National Ambient Air Quality Standards (NAAQS) chapter.**

(above) Monthly-average OMI NO<sub>2</sub> data for the Washington DC Metro area (source: <https://airquality.gsfc.nasa.gov>)

(above) Annual-average OMI NO<sub>2</sub> data for the U.S. (source: <https://svs.gsfc.nasa.gov/12094>)

## Applied Remote Sensing Training Program (ARSET)

POC: Ana. I. Prados, NASA-GSFC

### Objectives

- Provide end-users with **professional technical workshops**
- Build long-term partnerships with communities and institutions in the public and private sectors.

### Online and hands-on courses

- **Who:** policy makers, environmental managers, modelers and other professionals in the public and private sectors.
- **Where:** U.S and internationally
- **When:** throughout the year. Check websites.
- Do NOT require prior remote- sensing background.
- Presentations and hands-on guided computer exercises on how to access, interpret and use NASA satellite images for decision-support.

NASA ARSET Training for California Air Resources Board, Sacramento, CA
