**Associate Professor of Medicine**  
**Associate Chief, Division of Infectious Diseases**  
**Chief, Clinical Care, Institute of Human Virology**

**Something Practical from *Infectious Disease Control*:**

1. We may have to live with C19 for months or years. Let's not deny it or panic.  
Let's not make our lives useless. Let's learn to live with this fact.
2. Washing hands and maintaining a 2-meter physical distance is the best method for your protection.
3. If you don't have a C19 patient at home, there's no need to disinfect the surfaces at your house.
4. Packaged cargo, gas pumps, shopping carts, and ATMs do not cause infection.  
If you wash your hands, live your life as usual.
5. C19 is not a food infection. It is associated with drops of infection like the 'flu.  
There is no demonstrated risk that C19 is transmitted by food.
6. You can lose your sense of smell with a lot of allergies and viral infections.  
This is only a non-specific symptom of C19.
7. Once at home, you don't need to change your clothes urgently and go shower!  
Purity is a virtue, paranoia is not!
8. The C19 virus doesn't hang in the air for long.  
This is a respiratory droplet infection that requires close contact.
9. The chances of bringing C19 home with your shoes is like being struck by lightning twice in a day.  
I've been working against viruses for 20 years - drop infections don't spread like that!
10. It is sufficient to use normal soap against C19, not antibacterial soap. This is a virus, not bacteria.
11. You don't have to worry about your food orders.  
But you can heat it all up in the microwave if you wish.
12. You cannot be protected from the virus by taking vinegar, sugarcane juice, and ginger!  
These are for immunity! They are not a cure.
13. Wearing a mask for long periods interferes with your breathing and oxygen levels.  
Wear it only in crowds and groups.
14. Depending on gloves is also a bad idea; the virus can accumulate on the glove and easily be transmitted if you touch your face. Better just to wash your hands regularly.
15. Immunity is greatly weakened by always staying in a sterile environment.  
Even if you eat immunity-boosting foods, go out of your house regularly to any park/beach.
16. Immunity is increased by EXPOSURE TO PATHOGENS, not by sitting at home!
17. Open air is clean, you can walk through the park, just maintain your physical protection distance.

**Live life sensibly and to the fullest. Be smart and stay informed!**
